

Swapping Two Numbers

Aim

To swap the values of two numbers using RAPTOR.

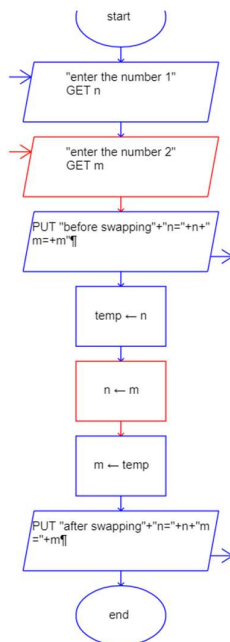

Apparatus Required

- Computer/Laptop
- RAPTOR Software
- Windows Operating System

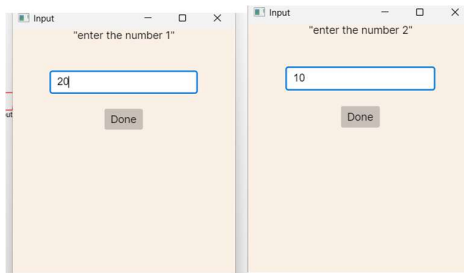

Procedure

1. Open RAPTOR software.
2. Create a new flowchart.
3. Input two numbers a and b.
4. Use a temporary variable temp to hold the value of a.
5. Assign the value of b to a, and the value of temp to b.
6. Display the swapped values of a and b.
7. Execute the flowchart and verify the output.

CODE

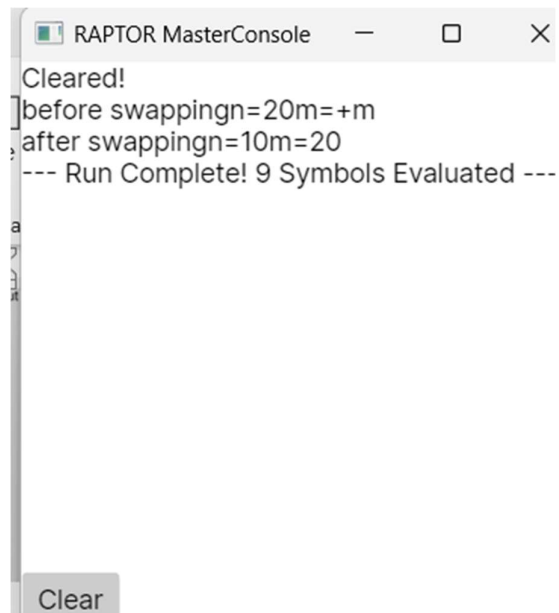

INPUT

Two input dialog boxes are shown side-by-side. The left dialog is titled "Input" and contains the text "enter the number 1". It has a text input field containing the number "20" and a "Done" button below it. The right dialog is also titled "Input" and contains the text "enter the number 2". It has a text input field containing the number "10" and a "Done" button below it.

OUTPUT

A screenshot of the RAPTOR MasterConsole window. The window title is "RAPTOR MasterConsole". The output text is as follows:
Cleared!
before swapping n=20 m=+m
after swapping n=10 m=20
--- Run Complete! 9 Symbols Evaluated ---
At the bottom left of the console area, there is a "Clear" button.
