

Finding Quotient and Remainder for Floating Point Numbers

Aim

To find the quotient and remainder when dividing two floating point numbers using RAPTOR.

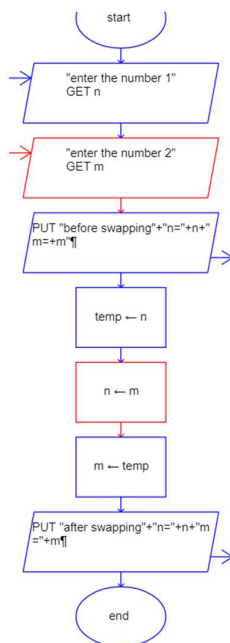

Apparatus Required

- Computer/Laptop
- RAPTOR Software
- Windows Operating System

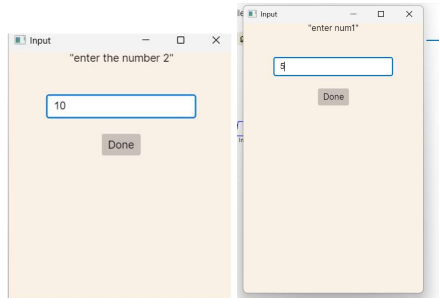

Procedure

1. Open RAPTOR software.
2. Create a new flowchart.
3. Input two floating point numbers a and b.
4. Compute quotient as the integer part of a / b .
5. Compute remainder as $a - (\text{quotient} * b)$.
6. Display the quotient and remainder.
7. Execute the flowchart and verify the output.
