

Finding Quotient and Remainder for Floating Point Numbers

Aim

To find the quotient and remainder when dividing two floating point numbers using RAPTOR.

Apparatus Required

- Computer/Laptop
- RAPTOR Software
- Windows Operating System

Procedure

1. Open RAPTOR software.
2. Create a new flowchart.
3. Input two floating point numbers a and b.
4. Compute quotient as the integer part of a / b .
5. Compute remainder as $a - (\text{quotient} * b)$.
6. Display the quotient and remainder.
7. Execute the flowchart and verify the output.

CODE :

INPUT

The image shows three separate input windows, each titled "Input".

- The first window prompts "enter the number of edges" and contains a text box with the value "10" and a "Done" button below it.
- The second window prompts "enter the number of nodes" and contains a text box with the value "20" and a "Done" button below it.
- The third window prompts "enter the predicate node" and contains a text box with the value "30" and a "Done" button below it.

OUTPUT

The image shows a console window titled "RAPTOR MasterConsole" with the following text:

```
formula 15  
formula 29  
--- Run Complete! 9 Symbols Evaluated ---
```

A "Clear" button is located at the bottom left of the console window.
